                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   growth e.g. cancers the standard of the bol-2 family, components the mammalian bol-y protein is a member of the bol-2 family, components in the cell death pathway. The bol-2 family have both apoptotic activity and the apoptosis blocking activity bol-y falls in the apoptosis activity caregory. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell death is desired.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 FSDLAAQLHVTPGSAQQRFTQVSDELFQGGPNWGRLVAFFVFGAALCAESVNKEMEPLVG 120

Novel bcl-y homologues of the rat and human bcl-2 protein - useful Novel bcl-y homologues of the rat and human bcl-2 protein - useful for modulating programmed cell death blastocaure; Columns 19-20; 26pp; English.

Disclosure; Columns 19-20; 26pp; English.

The specification describes rat bcl-y protein (Rbcl-y) and human bcl-y protein (Rbcl-y) and Rbcl-y and Rbcl-y are homologues of the bcl-2 protein (Rbcl-y) and Shcl-y and Bbcl-y proteins may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, Alzheimer's Disease, neural and muscular degenerative diseases (especially multiple sclerosis), myocardial camportophic lateral sclerosis-conditions where cells under go premature cell death as a result of triggers which may or may not be apparent. They may also be used in this way to develop cell lines which remain collines associated with prolonged cell life span such as cancer conditions associated with prolonged cell life span such as cancer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune contact.
                                                                                                                                           Protein sequence of the specification.

The mammalian bol-y protein is a member of the bol-2 family, components in the cell death pathway. The bol-2 family have both apoptotic activity and the apoptosis blocking activity. bol-y falls in the apoptosis activity category. The recombinent protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein associated with Bcl.w.

Claim 2: Page 33: 52pp; English.

The present sequence is human Bcl.w, a pro-survival member of the present sequence is human Bcl.w, a pro-survival member of the Bcl-2 family which is widely expressed and which is essential for Spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl.w gene (see X25132-35) or in a gene associated with bcl.w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no

Novel bcl-y homologues of the rat and human bcl-2 protein - useful for modulating programmed cell death

Cor modulating programmed cell death

Claim 1: Columns 17-18: 26pp; English.

Cor modulating programmed cell death

Cor modulating programmed cell death

Cor modulating programmed cell death

Cor modulating benear bcl-y protein (Rbcl-y). The

Specification also describes rat bcl-y protein (Rbcl-y). Rbcl-y and

Cor Bbcl-y are homologues of the bcl-2 protein (Rbcl-y). Rbcl-y and

Cord honologues of treat conditions associated with a disruption of

Core cell death pathway. If they act as cell death withbitcors, they may be

Used in therapies to treat subjects suffering from: strokes, head trauma,

Cord in therapies to treat subjects suffering from: strokes, head trauma,

Alzhelmer's Disease, neural and muscular degenerative diseases

Core cell death, aging, spinal cord injuries and amyotrophic lateral

Coll death, aging, spinal cord injuries and amyotrophic lateral

Coll death, aging, spinal cord injuries and amyotrophic lateral

Coll death, aging, spinal cord injuries and amyotrophic lateral

Coll death, aging, spinal cord injuries and amyotrophic lateral

Coll death, aging, spinal cord injuries and amyotrophic lateral

Coll death, aging, spinal cord injuries and amyotrophic lateral

Coll death, aging, spinal cord injuries and amyotrophic lateral

Coll death of the spinal cord in contrast, if they act as cell death stimulators,

Coll death and auto/Apperimmune diseases. They may also be used to

Coll death in, and hence control, parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The human bol, yprotein.

                                                                                                                                                                                                                                                                                                                                                                    protein associated with Bcl-w
Cliaim 2; Page 35; 52pp; English.
CC The present sequence is mouse Bcl-w, a pro-survival member of the English and Which is widely expressed and which is essential for The invention relates generally to a method of treatment and to an animal model for the identification of the extrament and to an animal model for the identification of fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating of infertility, or for reducing fertility, by modulating or spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene (see X25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise in animals, or which can induce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 FSDLAAQLHVTPGSAQQRFTQVSDELFQGGPNWGRLVAFFVFGAALCAESVNKEMEPLVG 120

Novel bcl.y handlogues of the rat and human bcl-2 protein - useful for modulating programmed cell death

For modulating programmed cell death

Protein modulating programmed cell death

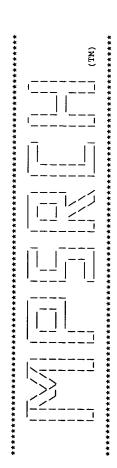

Protein conclusion also describes human bcl.y protein (Rbcl-y). The conclusion also describes human bcl.y protein (Rbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein thought to be involved in concern may be used to treat conditions associated with a disruption of programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y concerns may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, all concerns to bisease, neural and muscular degenerative diseases.

Concerns a bisease, neural and muscular degenerative diseases.

Concerns a program which may or may not be apparent. They may also be concerned beingers which may or may not be apparent. They may also be consequent to fringers which may or may not be apparent. They may also be consequent to treat conditions associated with this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, conditions and be apparent. They may be used to treat conditions associated with prolonged cell life span such as cancer (sepecially kaposi's sarcoma and lung cancer) and auto/hyperimmune diseases. They may also be used to cause cell death in, and hence control, parasites.
The rat bol-y protein.

The rat bol-y protein.

Rat bol-y protein, Rool-y; human bol-y protein; Hbol-y; bol-2 homologue; programmed cell death; apoptosis; necrosis; cell death inhibitor; stroke; head trauma; Alzheimer's Disease; neural; muscular degenerative disease; multiple solerosis; myocardial infarction; vitally induced cell death; apping; empotrophic lateral sclerosis; cancer; premature cell death; cell death stimulator; prolonged cell life span; Raposi's sarcoma; lung cancer; autoimmune; hyperimmune disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 FSDLAAQLHVTPGSAQQRFTQVSDELFQGGPNWGRLVAFFVFGAALCAESVNKEMEPLVG 120

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

#title Isolation and characterization of the chicken bcl-2 gene:
expression in a variety of tissues including lymphoid and
neuronal organs in adult and embryo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             76 VATAGPALSPVPPCVHLTLRRAGDDFSRRYRRDFAEMSSQLHLTPFTARGRFATVVEELF 135

NIH_BMAP_M_S3.1 library is a subtracted library of a
series, ultimately derived from a mixture of individually
tagged normalized libraries from ten regions of the mouse
brain (cerbellum, brain stems, olfactory bulbs,
hypothalamus, cortex, amygdala, basal ganglia, pineal
gland, striatum, hipoccampus) after a series of
subtractions to reduce the representation of cDNAs from
which ESTs had already been generated in this
process: NIH_BMAP_M_S3.1, NIH_BMAP_M_S3.1) was constructed
as follows: PCRamplified CDNA inserts from NIH_BMAP_M_S3
clones from which 3' ESTS had been derived was used as a
driver in a hybridization with the NIH_BMAP_M_S2
in the form of single-stranded circles. The remaining

Soares Lab Clone distribution: NIH BMAP cDNA clones will be made
available by the means that is soon to be determined. When NIH
determines the means for distribution of the BMAP cDNA clones, this
record will be updated accordingly when that means is determined.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
UI-R-E1, UI-R-C0, and UI-R-C1). The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dr track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-Y0) was constructed as follows: PCR amplified cDNA inserts from previous library clones from which 3' ESTS had been derived were used as a driver in a hybridization with the normalized whole-eye library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-Y0 library. This procedure has been previously described (BODA) and SOBALES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

/clouble-stranded cona was pize selected, ligated to Eco RI double-stranded cona, digested with Not I and cloned into the Not I and Eco RI sites of a modified pT773 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento soares and M.Fatima Bonaldo. This library was constructed from the same fetus as the fetal heart library, Soares fetal heart NbHH19W."
